

Forested Flyways is a Habitat Conservation program of the American Forest Foundation that links members of the American Tree Farm System (ATFS) with conservation groups and agencies to improve and restore wildlife habitat on family forestlands.

In 1999, the first Forested Flyways conservation partnership was formed with Ducks Unlimited and International Paper to plan, develop, and implement "flagship" projects focusing on wetlands and waterfowl habitat in South Carolina, Texas and Mississippi. Currently, Forested Flyways is seeking funding and developing partnerships to improve pine habitat for wildlife in the southeastern U.S. Initial focus states include Alabama, Georgia, Louisiana, Mississippi, and South Carolina.

By connecting forest owners with existing technical and financial assistance programs, Forested Flyways improves wildlife habitat and water quality, while encouraging landowners to sustainably manage their forest land and develop strategies to resist the increasing pressures from urban sprawl and development.

For more information on Forested Flyways visit our website at www.forestfoundation.org or call 1-888-889-4466

ATFS is a program of the American Forest Foundation
