What is social media?Which tools are out there?How to cut through the online "noise"?Q&A

What is social media?

Conversations about what *you* care about are happening everyday.

Social media can help you find and join them.

What's out there?

Facebook (social networking)Blogs (online journaling)Google Alerts (news aggregating)

What is Facebook?

An Internet-based community

Facebook by the numbers

500 million: Number of registered users

73: Percentage of online Americans who visit Facebook each month

682: People who "Like" the ATFS page

American Tree Farm System via Forest History Society

fhsarchives.wordpress.com

On June 12, 1941, the nation's first Tree Farm was dedicated. The 120,000-acre Clemons Tree Farm in Washington, owned by the Weyerhaeuser Timber Company, received that designation with great fanfare—Washington Governor Arthur Langlie and other dignitaries were on hand for the ceremony. From that one

My Longleaf Pine Restoration Story

🚹 Share

July 2, 2010 at 10:48 AM by Salem Saloom

In 2004 Hurricane Ivan wreaked havoc with its destruction to south Alabama. The day after the storm the stumpage price for our wood products were more than halved. After 5 months of logging clean-up and recouping only pennies on the dollar for salvaged timber, we decided to turn adversity into opportunity. Over the next 4 years we planted 450 acres of longleaf, and now we manage this ecosystem with prescribe burning, herbicide site prep and release and spraying for control and eradication of invasive species.

It was through incentive cost-share programs for replanting, control of invasive species, education for certified burn manager, wildlife habitat improvement programs, land recovery program that we were able to reinvest, replant and manage for sustainable forestry.

The results-an ecosystem that is thriving with wildlife including turkey and quail and the threatened gopher tortoise.

It has become our responsibility as family forest owners to manage our forest for improvement and sustainability.

We share and promote good forest management for future generations. We are actively involved in education through personal contacts, seminars, field days and programs such as Classroom in the Forest/Forest in the Classroom with school children on an annual basis. "Project Learning Tree," an American Forest Foundation program that is used to help educate teachers in environmental education. In May we had 500 people visiting our farm on two separate field days. One of these field days was titled "Longleaf Restoration and Wildlife Management."

There has been a dramatic decline in USDA-Forest Service Cooperative State and Private Funding from \$4million in 2007 to \$2.7million in 2010. This is just one example of the challenges that we all face. If these financial incentives are not there for the private forest owners to assist in good management improvements, then sustainability will be adversely affected. This is vital for future generations.

Tree Farmer Mathematician: Farm Bill Benefits Really Add Up

April 20, 2011 at 10:50 am by Walt Lange

With Congress beginning its work on the 2012 Farm Bill, we're looking to hear your Farm Bill stories. Share yours right here on the American Forest Foundation blog by submitting a comment in reply to Walt's story.

Despite a career teaching college mathematics, I often feel more at home out in the woods on my 32 acre farm in Ohio. Over the years, my wife, Donna, and I have poured ourselves into our land.

We have been working to improve the soil quality and eventually we will leave it in better shape for our daughters. In fact, when we bought the land, the soil was so dry and degraded that it literally drifted out onto the road. So we planted windbreaks, which have helped keep the soil in place in the years since.

Donna and I are now part of a regional initiative, the Lake Erie Conservation Reserve Enhancement Program, which is improving water quality in tributaries to Lake Erie by strategically investing in land conservation.

Through this program, we have been able to take farmland that flooded frequently and transported pesticides and fertilizers downstream—and instead reforest eight

acres of riparian buffer zones on the land. In addition, we planted grass strips in gullies, preventing the washouts that were all too common.

Why are Farm Bill conservation programs important?

Without the soil, we'd have nothing—no food, no land, no trees. We've got to protect it. And that's exactly what the Farm Bill has allowed us to do. We could not have completed all the forestry and conservation practices without the technical assistance of the various agencies and the cost-share funds to implement the various farm bill programs.

South Carolina Tree Farmers Lobby State

March 10, 2011 at 9:46 AM by Walt McPhail

Nearly 50 Tree Farmers, forest landowners and Tree Farm inspectors journeyed to Columbia to promote forests to state legislators. Priority issues included the importance of forestry to the state economy, the SC Forestry Commission budget, the Clemson Public Service Activities budget, and the South Carolina Department of Natural Resources budget. Additionally, participants expressed the importance of garnering legislator's commitment to pass the Prescribed Fire Act.

The Legislative Day was a success—participants enthusiastically educated state legislators on the critical role of forestry as the state's number one manufacturer. The forest industry provides more than 90,000 jobs with an overall economic impact of \$17.3 billion annually.

In addition, state House and Senate members received SC Tree Farm Committee information positively, proving that the event was a tremendous success. Impressively, participants were able to display the National Tree Farm exhibit in the capital's rotunda.

Furthermore, <u>resolutions were prepared by the General Assembly</u> highlighting the Tree Farm's 65th anniversary, while recognizing event participants in the chamber balconies. In particular, Bob Scott was recognized for 41 years of service as the South Carolina Fire Academy president, and Jeff Dennis was recognized as a recipient of the <u>Master Tree Farmer of the</u> <u>Year Award</u>.

Events like this, combined with continuous communication with state leaders, are critical to ensuring that forestry is properly recognized for its extreme importance to the state's economy, environment, and quality of life.

Many thanks to Denise Bonnette, the <u>Tree Farm State Committee</u> chair, who coordinated the event. The <u>American Forest</u> <u>Foundation</u> provided funding. Tree Farm Committee members Tom Patton and Scott Phillips also played leading roles in event planning and execution, and George Kessler served as media spokesman.

Author Walt McPhail is a South Carolina Tree Farmer was the 2003 Regional Outstanding Tree Farmer of the Year for the southern region.
